Tiffani N. White, Ph.D.

One of my research questions:
How does the blockade of Renin-angiotensin system (RAS) prevent the progression of diabetic kidney disease?

Technology I use:
I use many different databases with information on health, disease, and drug development from the Food and Drug Administration (FDA), World Health Organization (WHO), National Institutes of Health (NIH), and others.

My most exciting discovery:
Working with companies that have found novel ways to treat inoperable diseases such as cancer of the upper urinary tract.

To be a scientist, you need to:
1. LOVE the work you do!
2. Have confidence in what you know and learn what you don’t know.
3. Have great communication skills.

I knew I wanted to be a scientist when...
My family is full of people suffering from hypertension, diabetes, and other diseases common in the U.S. I always knew I wanted to help people get better drug treatment at an affordable price.
