**Are you looking for a workshop or training tool to help teachers and preservice teachers really think about their teaching — about the methods they use, the curricular materials they choose, and the classroom goals they set?**

*Reflecting on Effective Teaching Practices* is designed for just this purpose — as a tool to facilitate discussion and reflection on science teaching. It can be used in inservice workshops/ preservice classes and by individual teachers or pairs of teachers as a mini-study and reflection activity.

The videotape includes segments filmed in real-life classrooms. Each classroom segment is followed by a panel, including both the featured teacher and national experts, discussing curricular and methods options in teaching science. Discussion questions for each segment are provided to facilitate group discussion during workshops and preservice classes.
