Physiology Ad to post in the Job Website of the American Physiological Society  
Total: 195 words  

**Assistant Professor of Biology – Animal Physiology.** New Mexico State University invites applications for a tenure-track, assistant professor position in biology with a specialization in animal physiology. The successful applicant will demonstrate the expertise to assist the Biology Department with faculty responsibilities relating to the land-grant mission of the University. She/he will have the skills to offer lecture and laboratory courses in human physiology, animal physiology, comparative physiology, and general biology at the upper and lower division undergraduate level (majors and non-majors) as well as graduate courses in their area of expertise. She/he will demonstrate their potential to establish an independent research program, disseminate research through publications and presentations, secure independent funding, and participate in national, university, college, and departmental service and governance activities. She/he will be able to guide undergraduate and graduate student research, advise and mentor graduate and undergraduate students, and provide support for student retention and degree completion. NMSU is committed to building a diverse, student-centered educational environment. Review of complete applications including references begins on October 16, 2018 but files received after this date may be considered. NMSU is an EO/AA Employer.
