Applications are invited for a postdoctoral research associate to study neural
control of blood pressure and immune system in the laboratory of Dr. Jasenka
Zubcevic in the Department of Physiological Sciences at the College of
Veterinary Medicine, University of Florida in Gainesville. The research project will
investigate the interplay between autonomic nervous system and immune system
in salt-sensitive hypertension. The ideal candidate would have a PhD or be close
to completion, and a strong background in cardiovascular physiology and
autonomic neuroscience. Knowledge of the immune system is highly desirable.
Experience in one of either mouse telemetry or in situ electrophysiology is
required. The salary will depend on level of experience and NIH. Contract will
initially be given for one year with possibility of extension, pending individual’s
performance and continued funding.

Please send a CV with a list of publications and a short letter of intent to
jasenkaz@ufl.edu.
