Postdoctoral Research Associate

A postdoctoral position will become available in the lab of Prof. Robert Cousins at the University of Florida in the area of molecular nutrition/physiology as the incumbent moves to a faculty position in the fall. The lab is NIH-funded and is focused on the molecular roles of zinc transport and signaling with emphasis on inflammation with relevance to health promotion and defense against metabolic and neurodegenerative disease. Cell and molecular studies make extensive use of murine knockout models. Applicants need to have experience with molecular biological techniques and biochemical assays. The position provides the opportunity for both research independence, as well as being part of a team, in an active, internationally recognized laboratory.
