Postdoctoral positions are available, beginning January 2018, in the laboratory of Dr. Richard Gumina.

Dr. Gumina’s Lab studies the regulation of extracellular nucleotide metabolism in cardiovascular physiology and pathophysiology, utilizing a combination of biochemistry, molecular biology, cell biology, genomics approaches and animal models of cardiovascular disease.

The Division of Cardiovascular Medicine is seeking qualified and highly motivated postdoctoral candidates to join our NIH-funded team. Of special interest are individuals with expertise in molecular biology, cell culture, immunology and physiology. Experience in cell culture, fibroblast biology, atherosclerosis models and animal experiments is desirable. Experience in small animal surgeries is a plus, but not required.

Positions are open to graduating Ph.D. or M.D./Ph.D. students and current postdoctoral fellows. High levels of critical thinking, strong technical skills and recent first-author publications are required. Candidates should have strong English-language organizational, written and verbal communication skills. Candidates should also have the ability to work both independently and as part of our research team.

Applications are being accepted on line at http://unmc.peopleadmin.com/postings/36167. Individuals from diverse backgrounds are encouraged to apply.

Cover letter should include a brief summary of research experience and interests and three references.
