The Porter Physiology Development Committee continues to promote diversity in the American Physiological Society by strengthening programs to recruit, retain and fully engage underrepresented minorities and women. The committee continues to encourage diversity among students pursuing full-time studies toward the Ph.D. in the physiological sciences through the Porter Physiology Development Fellowship Program, as well as graduate students and faculty members at minority serving institutions through the APS-NIDDK minority travel fellows program. The committee also fosters communication between minority graduate and postdoctoral students and middle/high school minority life sciences students through the APS K-12 Minority Outreach Fellowship. The Porter Physiology Development Committee also provides representation at the Annual Biomedical Research Conference for Minority students, the Society for the Advancement of Chicanos and Native Americans in Science National Conference. The committee will continue to explore avenues to increase communication throughout the American Physiological Society about the Porter committee’s programs and activities.
