CORRECTION

In my article entitled "Animal Experimentation Control Bills in the United States Congress" in the February 1963 issue of THE PHYSIOLOGIST, an error was made in reporting the facts concerning the court disposition of the Overholt Clinic case in 1958. Further investigation of the facts in connection with this case indicate that the farmer, Mr. Hawkins, won a suspension of his jail sentence imposed after the first trial but was not declared innocent. In other words, this is an instance in which an animal caretaker and a physician in a small hospital were convicted of cruelty in connection with the postoperative care of animals.
