Faculty Positions Available at the Indiana University School of Medicine

Department of Anatomy, Cell Biology & Physiology
Indiana Center for Musculoskeletal Health

The Indiana University School of Medicine (IUSM) Department of Anatomy, Cell Biology & Physiology (ACBP) is seeking well-qualified and highly motivated applicants for multiple tenure-track faculty positions in skeletal muscle biology and bone biology. All academic ranks (Assistant to Full Professor) will be considered. Successful applicants must have a PhD and/or MD degree. The open faculty positions in ACBP are a joint venture with the Indiana Center for Musculoskeletal Health (ICMH)—a newly implemented venture for basic and clinical research, patient care, and education that focuses on the biology of bone, muscle, cartilage and ligament/tendon. These muscle and bone recruitments are part of a broad initiative between ACBP and the ICMH to expand ongoing neuromusculoskeletal biology research on the Indianapolis campus. Potential recruitments through the ACBP/ICMH partnership should align with the areas of interest for the ICMH, which include: skeletal biology, skeletal muscle physiology, musculoskeletal imaging, and muscle–bone mechanical and endocrine interactions. The IUSM is committed to advancing outstanding musculoskeletal research in an integrated environment of basic science and clinical care. Faculty must be highly collaborative and eager to work in interdisciplinary teams across fields and participate in the entire research spectrum (basic science, translational, clinical). Opportunities exist for collaborations on translational research within the musculoskeletal disorder fields throughout Indianapolis, including the thriving neuromusculoskeletal biology research program at the Roudebush VA Hospital, as well as at IUSM centers around the state. The successful applicants will have opportunities to engage in medical and graduate teaching. Applications will be reviewed on an ongoing basis; start dates are flexible.
