Job description:
Applications are invited for a research-oriented, tenure-track University Lectureship in Systems Physiology, available from 1 April 2020. Based in central Cambridge, we are keen to recruit a pioneering researcher working in this major theme in our Department (http://www.pdn.cam.ac.uk/research/). We are therefore searching for an outstanding scientist, with an excellent publication record, undertaking cutting edge and fundable work in any aspect of systems physiology.

The successful applicant will have a PhD in a relevant subject area, will have an aptitude and enthusiasm for teaching, and be willing to contribute effectively to our undergraduate programmes in preclinical medicine, preclinical veterinary science, and natural sciences (http://www.pdn.cam.ac.uk/teaching). He/she will be expected to contribute to the design and delivery of undergraduate and graduate lecture courses and to perform other academic duties including administration, examining and assessment.
